Dr. Price, the famous food expert, has produced a product called

DR. PRICE'S WHEAT FLAKE CEREAL FOOD

which is considered to represent the highest food production. Its healthful qualities are unsurpassed.

For sale by all Grocers

Not Quite the Same.
A country clergyman vouches for the truth of this story. Having arrived at that point in the baptismal service where the infant's name is conferred, he said, "Name this child."

"Original Story," said the sponsor nurse.

"What do you say?" he asked in surprise.

"Original Story," she repeated in clear, deliberate tones.

"It's a very old name, isn't it? Are you sure you want him called by the name of Original Story?"

"Original Story—that's right."

"Is it a family name?" the minister persisted.

"Named after his uncle, sir," explained the nurse.

And so as Original Story the little fellow was christened. Some weeks after this event the minister made the acquaintance of the said uncle—a farm laborer in another village—whose name was Reginald Story.—London Tatler.

French Superstitions.

The French superstitions regarding deaths and funerals are all but numberless. "If you meet a funeral while driving, you will have an accident before your drive is over unless you turn back," they say. Many a gambler en route for Monte Carlo will not gamble that day if he meets a funeral. Others will bet only at rouge et noir and persistently on the black. The peasants have at least a hundred superstitions about bees. They believe (and did not Virgil, too, or did he not chronicle it of his contemporaries?) that bees are bred of dead men's bones and flesh. This seems to be one of the oldest of the current French superstitions, for on a very old tomb at Arles found in the world famous Alyscamp is this inscription: "This Has Become the Home of Unhallowed Bees."—London Answers.

A Wasted Motion.

"Ladies," called the president of the afternoon whist club—ladies, it has been moved and seconded that there shall be no conversation at the card tables. What shall we do with the motion?"

"I suggest that we discuss it while we play," piped a shrill voice from Table A, and the suggestion was adopted.—Cleveland Plain Dealer.

Avarice.

Avarice is an incurable malady, an ever burning fire, a tyranny which extends far and wide, for he who in this life is the slave of money is loaded with heavy chains and destined to carry far heavier chains in the life to come.—St. John Chrysostom.

Our Prize Offer.

The Thrice-a-Week World expects to be a better paper in 1908 than ever before. In the course of the year the issues for the next great Presidential campaign will be fore-shadowed, and everybody will wish to keep informed. The Thrice-a-Week World, coming to you every other day, serves all the purposes of a daily, and is far cheaper.

The news service of this paper is constantly being increased, and it reports fully, accurately and promptly every event of importance in the world. Moreover, its political news is impartial giving you facts, not opinions and wishes. It has full markets, splendid cartoons and interesting fiction by standard authors.

THE THRICE-A-WEEK WORLD'S regular subscription price is only \$1.00 per year, and this pays for 156 papers. We offer this unequalled newspaper and THE FRENCH BROAD HUSTLER together for one year for \$1.60.

Rural Routes.

Postmaster Jackson desires to call attention to the practice of some patrons of rural delivery of placing loose coins in their boxes each time they desire to dispatch letters in advance of their delivery.

This practice imposes undue hardship on rural carriers in removing loose coins from boxes and delays them on the service of their routes.

The postmaster, therefore, urgently requests that patrons of rural delivery provide themselves and keep on hand a supply of stamps consistent with and in advance of their needs. It is also very desirable that rural patrons place in their mail boxes small detachable cups of wood or tin in which to place coins, when necessary, in purchasing supplies of stamps.

Farm and Garden

GROWING ALFALFA.

No One Type of Soil Has a Monopoly of Favorable Conditions.

The two plants shown in National Stockman and Farmer are from the plots of the Ohio experiment station, which is trying to develop varieties of alfalfa adapted to Ohio conditions as regards seed production, yield and quality of hay. Note the difference in

PLANT NO. 298.

[Record of plant No. 298 (Nursery, 1906). Yield of hay—stems, 57.0 grams; leaves, 23.3 grams. Per cent protein—stems, 7.51; leaves, 22.38. Per cent of leaves, 32.1.]

leafage in the two plants. Below is a summary of the records of two plants at the station:

The Ohio experiment station also says that the success with which alfalfa is growing in all parts of Ohio upon soils of widely varying character would indicate that there are few farms which do not have some land upon which it can be made to grow successfully. No one type of soil and no particular elevation has a monopoly of favorable conditions.

Upland clay and sandy first and second bottoms have produced the heaviest maximum and average yields.

Sandy upland and clay first and second bottoms have produced the lowest minimum and average yields.

Good yields and poor yields have been produced on all classes of soils, including muck, and some fields, having failed one or more times, have been made to produce good yields by a different method of procedure.

The presence or absence of drainage, humus, limestone and inoculation and the degree of perfection of the seed bed have usually been the controlling factors responsible for the varying successes.

Waterlogged soils, soils with water lying permanently within three feet of the surface and soils which become covered with water during the growing season for two days or more are not suitable for alfalfa.

The yields on clay upland with natural surface drainage were 12 per cent greater where tiles were also used.

Sandy soil or soil with very porous

PLANT NO. 21.

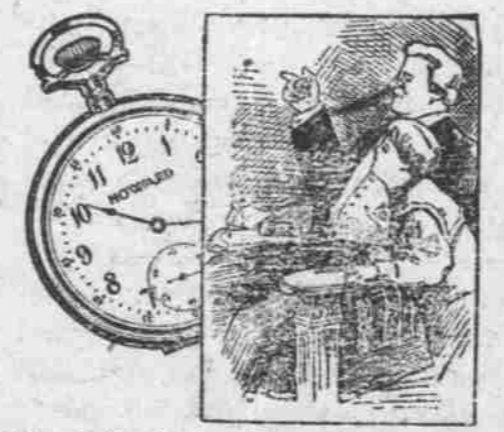

[Record of plant No. 21 (Alfalfa Nursery, 1906). Yield of hay—stems, 47.5 grams; leaves, 50.0 grams. Per cent protein—stems, 12.50; leaves, 23.81. Per cent of leaves, 55.8.]

subsoil is usually not sufficiently retentive of moisture to insure certain results on upland.

All soils reported to have the alfalfa were either poor in drainage or in humus or in both combined.

Yield of Mangels.

Mangels grown continuously on the same land for four years yielded 9.6 tons of roots, containing one ton of dry matter, while on land under rotation they yielded thirty-four tons of roots and four tons of dry matter per acre at the New York Cornell experiment station. From 25,000 to 30,000 plants of mangels, rutabagas and hybrid turnips and from 40,000 to 60,000

W. H. Hawkins & Son
Jewelers and Opticians.

plants of carrots per acre are suggested as proper stands.

Fertilizer Tests With Corn.
Fertilizer tests with corn in Virginia show clearly that plowing under green leguminous crops is a highly beneficial practice and that where this is followed only moderate amounts of fertility will be necessary to give increased yields. When vegetable matter is lacking, however, heavy applications of fertilizer seem advisable.—Andrew M. Soule.

Sugar Beets on Alkali Soil.
Beet fields subject to alkali are described as being characterized by a very uneven stand, considerable irregularity in the size of the plants and the prevalence of chlorosis of the older leaves.

Potash in Orchards.
Orchard practice as well as some experiments have demonstrated that the plea for potash in orchards may not always be founded on a real need.

He Always Remembered.
A smile lurked at the corners of Mrs. Lombard's mouth as she listened to the plaint of the school friend whom she had not seen for more than ten years. "I'm afraid, dear," she said, "you'll have to reconstruct some of your plans. You see, I married a forgetful man too."

"Why, you told me not ten minutes ago that your husband had never yet forgotten your birthday or your wedding anniversary," cried her friend, "and you told me you'd been married nearly eleven years! That's ever since the year after father took us all abroad."

"Yes," said Mrs. Lombard demurely, "I have. That's a long time, isn't it? But, you see, one thing was in my favor—I was born on the Fourth of July. Mr. Lombard couldn't very well forget the national holiday. And as soon as I'd found out how forgetful he was I decided to be married on another holiday."

"I suppose as you were abroad you didn't realize that the date of my wedding was unusual—people aren't often married on the 22d of February, I think. But you see, by a little judicious planning I've been saved the necessity of reminding him about our anniversary."—Youth's Companion.

Sweetly Thoughtful.
The De Jones back lawn was a lawn in name only. It was really an arid desert—bald, so to speak—and in dry weather it was always as dusty as a motor track. To the astonishment of Mrs. De Smythe, who lived next door, she one day saw her devoted husband turning the garden hose upon the De Jones' "lawn."

"Well, I never!" she exclaimed. "I'm sure I wouldn't trouble to lay the dust in the De Jones' back yard, John, especially as they are such a hateful lot of gossipers. Small thanks you'll get for your trouble anyway."

Hubby turned to his better half with a smile which told of mixed pleasure and vindictiveness.

"That's all right, my dear. Their darling little Fido was washed snow white this morning. Now he's out there rolling about like a barrel and rubbing the mud well into his fleecy coat. Trust your husband, my sweet, for real, unadulterated thoughtfulness!"—London Scraps.

Women and "Sport."
When a big shoot takes place in the coverts near one of our country houses the occasion is made a sort of society gathering. The ladies of the house party grace it with their presence, and other ladies of the neighborhood are glad to be allowed the honor of such company. Thus a large and fashionable party assembles, and while each beat is in progress the girls and women try to look on unmoved while a wounded hare kicks and squeals upon the ground for minutes which seem interminable to the sensitive onlooker until the beat is over and the dogs are loosed to dash off the cripples. And, though the hare's piteous shrieking makes its case seem the worst, the mere tumbling over and over of a wounded bird is a shocking sight to see as the time passes and no one goes forward to release it of its life.—London Mail.

Dodging Thirteen.
"When I lived in New York," writes a former New Yorker from Berlin, "there was a house near Central park which should have borne the number 13, but because of the superstition of the occupant permission was secured to place the number 11a or 15a over the door. I spoke of the circumstance a few days ago and learned that the thirteen superstition was more clearly marked here. In the instance mentioned by me an individual was concerned. He was the most important corporation in Westchester. There is no No. 13 bathroom in any of the bathhouses, no No. 13 room in any hotel and no No. 13 place at any table d'hôte. At Langenschwalbach the baths, under government control, also have bath cells No. 12a where they should be numbered 13."—New York Tribune.

A Worthy Antagonist.
"Did you visit any of the old caves when you were up in Scotland?" Jorkins was asked by a friend.

"Yes," replied Jorkins reminiscently, "and, by gum, we had to forebly pull Maria out of one cave."

"Good gracious! She was fascinated by its beauty, I suppose."

"No, it wasn't beauty. You see, there is a wonderful echo in the cave, and Maria couldn't hear to think of the echo having the last word."—Liverpool Mercury.

"TEARS."
Idle tears do no good after the baby is gone. Croup and colds and little white coffins go hand in hand. GOWAN'S great external remedy, called GOWAN'S PNEUMONIA CURE destroys inflammation. Keeps a bottle in the home. 25c, 50c, \$1 buys it. Do not wait till to-morrow—buy to-day. Be prepared. All drug stores.

Shortening Sources

Lard is made from hog-fat; its origin is the pig-sty. It makes food greasy, indigestible and dangerous.

Cottolene comes from the cotton fields of the Sunny South. Its basis is the purest refined cotton-seed oil. It is pure, healthful, and makes digestible, nourishing food. It is Nature's gift from the Sunny South, and is the best frying and shortening medium possible to manufacture.

Once get in the habit of using **Cottolene**, and you will never let lard enter your kitchen again.

Soft, extra fine quality skins. Large assortment. All sizes, good values. 10c to \$1

Nail files

Long thin ones, well tempered, made for service. 10c to 25c.

Nail brushes

All very well made. Good long wearing bristles. Five styles to select from. 25c to 50c.

„Hunters' Pharmacy."

More and Better Tobacco—Bigger Profits

The labor is as great to grow and harvest a poor crop as a good one. When you can so surely "increase your yields per acre" and get a far better quality of tobacco by using

Virginia-Carolina Fertilizers

why not use them this season? There's no reason why you cannot accomplish the same as thousands of others. Mr. V. C. Love, of Tinkling, Va., says "As a producer of fine tobacco, I do not feel I can say enough for your fertilizer. It makes tobacco that brings me more money than any other fertilizer I can get. I have tried many other brands but none equalled yours. I believe Virginia-Carolina Fertilizers to be the best on the market for tobacco."

Virginia-Carolina Fertilizers contain better and higher grade materials than any other brands of tobacco fertilizer. They will increase the yield per acre, and improve the texture and quality of the tobacco you grow, so you can get a better price per pound than ever before.

Much valuable information on tobacco-culture will be found in the new "Virginia-Carolina Year Book or Almanac. Don't fail to ask your fertilizer dealer for a copy, or write our nearest sales office and one will be sent you free.
